

GTRADES-AXIS™ ACADEMY

MODULE 1 – INTRODUCTION

GTRADES-AXIS™

INTRODUCTION

Trade with Structure. Execute with Precision.

Welcome

Welcome to GTRADES-AXIS™ Academy. This course is designed to guide traders through one complete trading framework from market understanding to disciplined execution. The focus is on developing consistent habits rather than chasing quick profits.

Mission

To empower traders through structured education, disciplined execution and professional risk management.

Vision

To build a respected global trading community recognized for consistency, integrity and continuous learning.

Core Values

- Discipline
- Consistency
- Patience
- Accountability
- Continuous Learning
- Professionalism

Learning Path

1. Introduction
2. Market Structure
3. Supply & Demand
4. Liquidity
5. Entries
6. Trade Management
7. Psychology

How to Use This Course

Study each module in sequence. Take notes, practice on charts, journal your trades and avoid skipping lessons.

Required Tools

TradingView
MetaTrader 5
Trading Journal
Economic Calendar
Reliable Internet

Community Rules

Respect members.
No spam.
No signal selling.
Protect academy material.
Focus on learning and professionalism.

Trading Expectations

Trading is a skill developed through repetition and discipline. Risk management comes before profit. Consistency is the long-term objective.

Remember

TRADING IS NOT ABOUT GETTING RICH OVERNIGHT.

IT IS ABOUT DEVELOPING A SKILL THAT CAN GENERATE CONSISTENT RESULTS THROUGH DISCIPLINE, PATIENCE, AND STRUCTURED EXECUTION.

AT GTRADES-AXIS™, WE DON'T CHASE THE MARKET.

WE TRADE WITH STRUCTURE. EXECUTE WITH PRECISION.

Disclaimer

This material is for educational purposes only and does not constitute financial advice. Trading financial markets involves substantial risk.

Module Summary

After completing this module you should understand the academy structure, learning expectations and the mindset required before moving into Market Structure.

\$¥ CURRENCY PAIRS, PIPS & MARKET BASICS

The Major Currencies

As a beginner, you do not need to trade every currency in the market.

We recommend focusing on the 8 major currencies, as they have the highest trading volume, deepest liquidity, and generally the lowest transaction costs.

Currency	Code
 United States Dollar	USD
 Euro	EUR
 Great British Pound	GBP
 Japanese Yen	JPY
 Australian Dollar	AUD
 New Zealand Dollar	NZD
 Canadian Dollar	CAD
 Swiss Franc	CHF

These currencies are actively traded by banks, institutions, governments, and retail traders around the world.

Exotic Currencies

Currencies outside the major eight are commonly referred to as exotic currencies.

Examples include:

- Turkish Lira (TRY)
- South African Rand (ZAR)
- Mexican Peso (MXN)

Although they can provide opportunities, they often have:

- Higher spreads
- Lower liquidity
- Larger price gaps
- Increased volatility

For beginners, it is generally better to focus on the major currency pairs.

What is a Currency Pair?

Currencies are always traded in pairs.

When you trade Forex, you are buying one currency while simultaneously selling another.

Example:

EUR/USD

- EUR = Base Currency
- USD = Quote Currency

If EUR/USD is trading at 1.1700, it means:

1 Euro = 1.1700 US Dollars

Buy vs Sell

Every Forex trade has only two possible directions.

Buy (Long)

You buy when you expect the base currency to increase in value against the quote currency.

Example:

Buy EUR/USD because you expect the Euro to strengthen.

Sell (Short)

You sell when you expect the base currency to weaken against the quote currency.

Example:

Sell EUR/USD because you expect the Euro to lose value against the US Dollar.

Major and Cross Currency Pairs

The eight major currencies create 28 commonly traded currency pairs.

Major Pairs

Major pairs always contain the US Dollar (USD).

Examples:

- EUR/USD
- GBP/USD
- AUD/USD
- USD/JPY
- USD/CAD
- USD/CHF
- NZD/USD

These pairs usually have:

- High liquidity

- Lower spreads
 - Stable execution
-

Cross (Minor) Pairs

Cross pairs do not include the US Dollar.

Examples:

- GBP/JPY
- EUR/GBP
- EUR/JPY
- AUD/JPY

They can move strongly and often provide excellent trading opportunities.

The GTRADES-AXIS™ Focus

Many traders believe they must trade dozens of currency pairs every day.

This is not necessary.

At GTRADES-AXIS™, we encourage mastery over quantity.

Rather than chasing every opportunity, focus on a small watchlist and learn how each pair behaves.

Our primary trading pairs are:

- EUR/USD (EU)
- GBP/USD (GU)
- GBP/JPY (GJ)
- USD/JPY (UJ)

Mastering a few pairs is far more effective than constantly switching between many markets.

Understanding Pips

A pip is the standard unit used to measure price movement in Forex.

For most currency pairs:

1 Pip = 0.0001

Example:

EUR/USD moves from

1.1200

to

1.1201

Price has moved 1 pip.

JPY Pairs

Japanese Yen pairs are slightly different.

Example:

USD/JPY

150.20

to

150.21

equals 1 pip.

For JPY pairs:

1 Pip = 0.01

Pipettes

Many brokers display an extra decimal place.

This is called a pipette, which equals one-tenth of a pip.

Example:

1 Pip = 10 Pipettes

HOW MONEY IS MADE IN FOREX

What is a Lot?

A lot is the standardized size used when placing trades.

Lot Size	Units
Standard	100,000
Mini	10,000
Micro	1,000

Your position size determines how much each pip is worth.

Learning proper position sizing is one of the most important risk management skills.

What is Leverage?

Leverage allows traders to control larger positions using a smaller amount of capital.

For example:

Using 1:100 leverage means a small deposit can control a position much larger than your account balance.

Leverage increases buying power—but it does not improve your trading strategy.

What is Margin?

Margin is the amount of money required to open and maintain a leveraged trade.

It acts as a security deposit while your trade remains open.

Higher leverage generally requires less margin, while lower leverage requires more.

The Truth About Leverage

Many beginners believe high leverage creates profitable traders.

It doesn't.

Leverage simply magnifies whatever results your strategy already produces.

A disciplined trader can use leverage responsibly.

An emotional trader can lose an account very quickly.

Leverage should never replace good risk management.

HOW TO ANALYZE THE FOREX MARKET

Successful traders analyze the market before placing trades.

There are three common approaches.

1. Fundamental Analysis

Fundamental analysis studies the economic strength of countries.

Currencies often gain or lose value because of economic events such as:

- Interest rates
- Inflation
- Employment data
- GDP growth
- Central bank decisions
- Retail sales
- Manufacturing reports

Strong economies generally attract investment, increasing demand for that country's currency.

2. Technical Analysis

Technical analysis studies price movement on charts.

Instead of predicting the news, technical traders analyze what price is already revealing.

At GTRADES-AXIS™, technical analysis focuses on:

- Market Structure
- Supply & Demand
- Liquidity
- Price Action
- High-Probability Entries
- Risk Management

Everything institutions do eventually leaves evidence on the chart.

Our goal is to learn how to read that evidence.

3. Hybrid Analysis

Many professional traders combine both approaches.

They use fundamentals to understand the broader market environment and technical analysis to identify precise trade entries.

Understanding Market Mechanics

Every movement in the Forex market is driven by Supply and Demand.

When buying pressure exceeds selling pressure, prices rise.

When selling pressure exceeds buying pressure, prices fall.

Price constantly moves because millions of participants—including banks, institutions, hedge funds, companies, governments, and retail traders—are buying and selling for different reasons.

The chart is simply a visual record of this ongoing battle.

Candlestick Charts

Price is displayed using candlesticks.

Each candlestick shows:

- Opening Price
- Highest Price
- Lowest Price
- Closing Price

By reading candlestick behavior together with market structure, traders can better understand momentum and potential market direction.

Trading Styles

Every trader develops a style that suits their personality and schedule.

Scalping

Holding trades for seconds or minutes.

Day Trading

Opening and closing trades within the same trading day.

Swing Trading

Holding positions for several days or weeks.

Position Trading

Holding trades for months based on long-term trends.

At GTRADES-AXIS™, our primary focus is day trading and scalping, using structured market analysis and disciplined execution.

Key Takeaway

The market does not reward those who trade the most.

It rewards those who consistently execute a proven strategy with discipline, patience, and effective risk management.

Trade with Structure. Execute with Precision.
